

Kit Cool instructions for use

Screw the roller cradle to the extendable tube. Pass the tube through the small loop of the elasticated shoulder strap.

Push fit the belt clip into the bottom of the extending tube. Place the belt clip on a belt at waist level.

Tighten the strap until the KIT COOL is vertical. For greater comfort ensure that the pole is to one side of the body.

Adjust the tube to a convenient height so that your boom pole balances comfortably on the rollers.

The position of the microphone can then be easily altered and accurately controlled directly with one hand placed on the end of the boom pole. To adjust length of tube:

1. Twist the middle, or small collar half a turn counter clockwise
2. Adjust length of tube
3. Tighten by twisting tube clockwise Note the large plastic collar can not be loosened

Make sure that you do not tilt KIT COOL too much to one side, otherwise the boom pole will slide off the rollers.

It is advisable, when using an audio mixer, to place the KIT COOL strap over the opposite shoulder to the mixer strap.

To remove the belt clip from the extending tube pull straight out and not at an angle.

Should it rain whilst using KIT COOL to prevent the cushion from absorbing water it can either be dispensed with or covered with cling film.
